

CARL VON MICHALKOWSKI
NATURDÄRME | NATURAL CASINGS

CvM Long Life - Ready-to-stuff products

1. Preparation:

Remove the ready-to-stuff hanks from the bundle and pull them through once. Then soak them in a cold water bath (15-20°C) for 1-2 hours.

2. Preparation before stuffing:

Before stuffing, allow the soaked product to drip off briefly and continue soaking for another 30 minutes in a warm water bath (30°C).

3. Stuffing:

Remove the ready-to-stuff hanks from the water bath at the merged ends of the ring.

Then remove the ring and place the ends individually on the table for easy pulling onto the stuffing horn.

Now the natural casing can be stuffed.

4. Storage:

If parts of the soaked casings have not been processed after stuffing, please ensure that the product has sufficient time to drip off. Afterwards the natural casing should be preserved again with sufficient brine (25%) or salt. Please store the goods in a cool place to avoid contamination with microorganisms.

We would like to thank you for the trust you have placed in our products!

With us you as our customer are the centre of attention:
We try to tailor each product precisely to your individual requirements and processes -
just ask for more information!
